JOURNAL OF CRYSTAL GROWTH

# Subject index

Apparatus
– for crystal growth
– – by visual observation of pressure driven growth 591

Cellular growth
– of ice 577
– of succinonitrile–ethanol 548
Computer simulation
– of Bridgman thermal stress 361
– of Czochralski growth of germanium 65, 77
– of flow in directional solidification 601
– of rutile metalorganic chemical vapor deposition growth 154
– of striations 373
Constitutional supercooling
– of indium antimonide 1
– of molybdenum disilicide 166
Convection 270, 303, 373, 601

Dendritic growth
– of carbon 111
Device characterization
– electronic materials 50
– lasers 506
– quantum dots 61
– quantum wells 349
– quantum wires 341
Diamond 485
Dissolution
– of lysozyme 554

Electronic materials, see Device characterization
Etching
– chemical
– – of lithium niobate 477
Eutectic growth
– of alumina–zirconia 119

Gallium
– arsenide 361

Heat flow
– in ideal gas 288
Hydrodynamics, see Convection

Kinetics
– of growth 154, 174, 183, 209, 538, 559
– of interface control 577
– of nucleation 538
– of transformation process in underpotential deposition 250

Lasers, see Device characterization
Lasers, crystals for
– nonlinear optics 531
– potassium niobate 501
Lysozyme 226, 554

Melt growth technique
– by Bridgman–Stockbarger method
– – of cadmium zinc telluride 357
– – of gallium arsenide 361
– – of germanium 361
– – of indium antimonide 1
– – of iron rare earth 125
– – of silicon–germanium 56
– – of zinc telluride 32
– by Czochralski method
– – of calcium yttrium aluminate 392
– – of germanium 65, 77
– – of lead molybdate 136
– – of neodymium gallate 109
– – of strontium lanthanum aluminate 387
– – of strontium lanthanum gallate 387
– by floating zone method
– – of strontium cuprate chloride 102
– by micro pulling down method
– – of garnets 463
– by Stepanov (edge-defined film-fed growth) method
– – of alumina–zirconia eutectics 119
– by submerged heater
– – of germanium 566
– by vertical Bridgman method
– – of copper indium diselenide 415
– by vertical gradient freeze
– – of gallium arsenide 373
– by zone melting
– – of silicon–germanium 56
– theory of impurity distribution 94
Microgravity, growth under
– of diacetylene-2-methyl-4-nitroaniline 288
– of proteins 219
– theory of dendritic growth 303

Morphological stability
– of Hartman–Perdok theory for calcium yttrium aluminate 392
– of gel media 543
– of ice 577
– of polysilicon 50
– of protein crystals 559
– of strontium lanthanum aluminate 387
– of strontium lanthanum gallate 387

Nucleation
– of diamond 485
– of epsilon-caprolactam 538
– of gibbsite 197
– of molybdenum disilicide 166
– theory of driving force in multicomponent 259
Numbers
– Biot 361
– Grashof 270, 288, 566
– Peclet 361
– Prandtl 288
– Rayleigh 270, 288, 548
– Reynolds 548

Phase diagram
– of lithium tetraborate 458
– of lysozyme under high pressure 554
– of mercury cadmium telluride 45, 311
– of p-xylene 591
Precursor
– for cancrinite 209
– for gallium arsenide by labeled $^{13}C$ trimethylarsine 21
– for lysozyme crystallization 226
– for physical vapor deposition 288
Proteins 219, 226
Purification of materials
– of zinc telluride 32

Quantum dots, see Device characterization
Quantum wells, see Device characterization
Quantum wires, see Device characterization

Silicon
– germanium 56, 61
Solid growth technique
– by polymorphic technique
– – of gibbsite 197
– by recrystallization
– – of polysilicon 50
– theory of flow in directional solidification 601
Solution growth technique
– by chemostatic method
– – of calcite 190
– by flux method
– – of cadmium gallate 131
– – of iridium–tellurium 586
– – of potassium nitrate 174, 183
– – of potassium titanyl arsenate 146, 472
– – of potassium titanyl phosphate 472
– – of praseodymium-doped yttrium barium copper oxide 380
– – of PrBaCO 409
– – of zinc gallate 131
– – of zinc telluride 32
– by gel method
– – of carbohydrate 543
– – of potassium tantalate niobate 314
– – of saccharin 543
– by low temperature method
– – of cadmium telluride 525
– – of calcium carbonate 318
– – of lithium iodide 512
– – of potassium dehydrate phosphate 531
– by recrystallization
– – of lead iodide 447
– by Staskum's method
– – of 4-aminobenzophenone 506
– by static growth
– – of lysozyme 554
– by stoichiometric source
– – of zinc selenide 39
– by top seeded solution
– – of lithium tetraborate 458
– – of potassium niobate 501
– by vapor diffusion
– – of apocrustacyanin $C_1$ 219
Superconductivity materials, high $T_c$
– bulk
– – of strontium cuprate chloride 102
– film
– – of praseodymium-doped yttrium barium copper oxide 380
Surface energy, determination
– of diastereomeric salt 236
– of epsilon-caprolactam 538
– of molybdenum disilicide 166
– of p-xylene 591

Thin film growth, epitaxy
– by liquid phase epitaxy
– – of mercury cadmium telluride 311
– by molecular beam epitaxy
– – of gallium nitride 321
– – of permalloy 442
– – of silicon germanium 61
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of carbon 111
– – – of diamond 485
– – – of polysilicon 50
– – – theory of 270
– – through evaporation and condensation
– – – of gallium nitride 307
– – – of lead molybdate 493
– – – of mercury cadmium iodine 425
– – – of titanium on magnesium oxide 433
– – through laser ablation
– – – of aluminum nitride 12
– – – of gallium nitride 12

– – – of indium nitride 12
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium arsenide 341
– – – of gallium arsenide 21, 341, 349
– – – of gallium indium phosphide 333
– – – of gallium nitride 27
– – – of lead titanate 453
– – – of lead zirconate titanate 453
– – through physical vapor deposition
– – – of zinc selenium sulphide 516
– – – of zinc selenium telluride 516
– – through sputtering
– – – of lanthanum aluminate 401
– – – of strontium titanate 401
